Houses of Worship

When it comes to Sound Systems for Houses of Worship

Smeed Receives High Praise

At Smeed Communication Services, we recognize the importance of high quality communication equipment for Houses of Worship. Since 1946, we've helped Houses of Worship customize communication systems to meet their specific needs.

Today, as one of the region's largest single-source suppliers, we have access to the most advanced electronic and telecommunications equipment. We also have the training necessary to design, install and service the systems we provide.

Smeed Communication Services - Helping Churches with Sound Decisions Since 1946.

The specialists at Smeed Communication Services understand the significant role that a Sound System plays in the delivery of the spoken word. Your message, and your music all must be crystal-clear to enhance the religious experience.

We understand these systems need to offer ease of operation, while providing the best sound possible for your sanctuary. They must also blend in with your decor, rather than be the center of attention.

Smeed engineers, designs, and installs custom sound systems to enhance the worship experience. This is why Houses of Worship have chosen Smeed to provide the finest in sound and audio equipment for over 60 years.

In addition to offering a full range of Sound products and options, our staff will assist you with the training necessary to take full advantage of each component we install.

Our specialists are trained to not only recommend a full-range of communication and electronic options, but possess the know-how to maximize their potential once they are in place.

Smeed Communication Services is an authorized dealer for; Bose, Biamp, NEC and Shure.

Connecting Your House of Worship with Tomorrow's Technology

Communication SOLUTIONS *specifically for* Houses of Worship

Alarm Systems

In today's age of take what you can get. A church can't be too careful when protecting it's possessions. Smeed can install alarm systems that can notify authorities of unauthorized entry into your church during day or night. To prevent unauthorized entry, a Smeed system can use door, window, smoke and motion sensors to activate siren or silent alarm.

Assisted Listening Systems

Sound Enhancement Systems are designed especially for use in churches, where hearing can be difficult. It actually brings a speaker's voice, music or other program sound directly to the listener's ear, so that distracting noises, reverberation or distance from the sound source no longer interfere with a person's ability to hear. These systems can be added to existing sound systems or can be free standing. Smeed sells both inductive loop type and FM modulated systems.

CCTV/Closed Circuit TV

CCTV equipment enables users the capability of monitoring virtually anything and anyone, anytime and anywhere. Churches are well aware of this and are beginning to demand the integration of CCTV security into more and more building concepts, as a means of combating rising risks of liability and property crime.

Information on Hold

Smeed installs Digital message units to play messages while people are on hold. This unit is connected to your telephone equipment.

Network Cabling (Voice, Data and Video)

We install all types of Voice, Data, and Video cabling including twisted pair (CAT 5e), coax and fiber cables to meet any application.

Engineered Sound

Smeed Communication Services provides professional audio equipment for concert hall quality in the most demanding conditions. Bose® has developed a way to actually hear and judge speech intelligibility before a sound system is installed -- even before the building is built. This cutting-edge technology is called the Auditor audio demonstration system.

Portable Sound

Smeed has a portable sound system for just about any application. We design them to be easy to use, and simple to set up. Remember the most important part of a sound system is the sound.

Telephone Systems

A multi-line telephone system should be installed that not only handles your current information flow, but that can also expand as your Church grows. Smeed only installs the finest NEC digital telephone and voice mail systems.

Wireless Microphone

Wireless microphones have, in recent years, evolved into widely accepted tools for House of Worship audio applications. The use of wireless mics conveys a highly desirable image of professionalism, as well as enhances the visual appeal of presentations and performances. Wireless mics are used where wired mics are impractical.
